Her Royal Highness the Infanta Cristina visits INSTRUMENTATION LABORATORY (IL) Lexington with her husband

April 11th, 2008 was an exceptional date for Werfen Group. On that day IL Lexington, manufacturing analyzers and IVD reagents, received the special visit of Her Royal Highness the Infanta Cristina of Spain. The daughter of His Majesty Don Juan Carlos I King of Spain came to IL facilities together with other distinguished personalities: her husband Don Iñaki Urdangarín, Duke of Palma, the Spanish Ambassador to the United States and the Spanish Consul in Boston.

Her Royal Highness and the other VIP visitors were welcomed by IL management, who showed them the manufacturing and R+D facilities. Information about this important visit can be found on the official web site of the Spanish Crown (<http://www.casareal.es>) where IL is congratulated for its size in number of employees, its presence on the market and the geographic coverage.

We are extremely honoured for this unprecedented visit. It was a reminder of the proud relationship existing between the Spanish State and our company and the demonstration that IL's achievements keep capturing the interest and provoking enthusiasm among the most distinguished Spanish personalities.

In the attached photograph the Royal couple observes with interest the technical details of our ACL TOP Coagulation Analyzer.
